

PROJECT OBJECTIVE

TEAM ID: PNT2022TMID04288

PROJECT NAME: University Admit Eligibility Predictor

Project Objective

For many students, the college entrance predictor is a blessing. In addition to assisting with application form completion, this aids students in getting an idea of their prospective colleges by calculating their cut off.

It might be challenging for pupils from remote areas to follow the proper processes. Thus, this application greatly aids them and allays their concern.

This application aids applicants in finding the finest universities regardless of their test scores.

Therefore, the students would benefit from our suggested computer-aided method by being able to quickly and easily access a list of all colleges where they may apply for admission.

Simply insert your students' XII, AIEEE, etc. grades. With the help of this application, students may quickly and conveniently get a list of colleges, even by branch and subject. As a result, students' stress levels will be reduced while the admissions procedure is also made simple. Making the appropriate college selection is our system's primary goal.
